recycling' nature' work' home

SOUND ABSORBING SOLUTIONS FOR THE NEW CORPORATE CULTURE

Noise is the information.

At least our brain perceives it so.

For thousands of years, it has been exercising catching the slightest rustles and changes in the ambiance to recognize the threat.

Your brain continues doing it. Even right now when you are reading those words.

The sound is a wave and waves tend to reflect from surfaces. They reflect almost without loss from concrete, steel, timber, or brick. Sound waves strike such surfaces and bounce back in some other direction again and again.

A barely noticeable buzz that appears is reverberation. Staying in such a space raises the stress and anxiety level up to 30%. Your concentration and attention level decrease proportionally.

How to achieve acoustic comfort? Sound absorbing materials on the walls, ceiling and installed as space-dividers decrease the reverberation level. They absorb sound waves instead of reflecting them.

Office buzz vanishes, the level of the background stress decreases, and you can work productively again.

We work according to the methodology that allows us to find the best solution for a particular space depending on its dimensions and functional purpose.

We create acoustic projects for offices and private interiors.

We use PET felt material made of recycled plastic bottles. Hypoallergenic, non-toxic and easy to clean it is the best solution for public and private spaces.

For us it is important to use recycled material, it is our contribution to decreasing the quantity of waste on our planet.

Our mission is to bring back the joy of the working day to people and empower them to be effective and cut the stress level.

Our tools are sound-absorbing materials and constructions made of them, and also comfortable furniture.

OUR CREATIVE TEAM
who think up with all this beauty

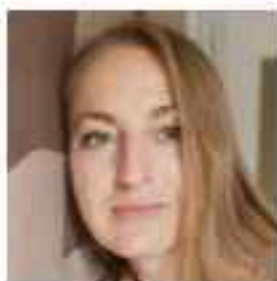

**EVGEN LITVINENKO**

Designer / Founder of the studio Litvinenko Design and the brand The O

It's time to rethink the office, to end its status of a place of constant stress and stuffy corporate culture. An office can be cozy and emotional, and playful elements are appropriate in it.

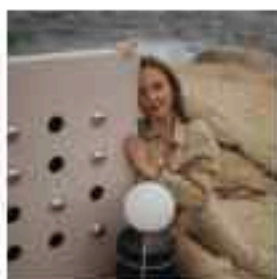

**DMYTRO YAKOVLEV**

Designer

**KATERYNA MORGENTAL**

Artist, designer / Founder of the brand MORGENTALART

ABSTRACTerra compositions are designed to bring peace and tranquillity to your living space. It is a symbiosis of abstract art and inspiration from the natural stones of the coast.

**MARIANA BASARAB**

Interior designer / 3D visualiser

PLAYFORM line was created as an exploration of form, sound and interaction, where functionality is combined with artistic expression. The concept is based on modularity and user participation, allowing the object to transform through movement and individual configuration. The aim was to create not just a static object, but a "living" one that responds to space, touch and imagination, whilst maintaining a refined contemporary aesthetic.

VLADYSLAV TOLOCHKO

Architect, designer / Founder of the design studio ITS

When creating each object, I live a full life with it, completely devoting myself to the creation, search for forms, lines, and proportions. I believe that what surrounds us is the INFINITY that we ourselves are.

KRISTINA GAIDAMAKA

Artist, designer / Founder of the brand Art&Design

My brand motto: the typical becomes unique when art meets design. It is wonderful when such things are present in our lives not only at home, but also in the office. I believe that aesthetics affect the psychological environment and therefore performance. The combination of thoughtful design and functionality is perfect. We managed to implement this in a series of acoustic products created together with RE:QUIET.

SARA MATISOVA AND IGOR SABADOŠ

IHOR Studio / Czech Republic

The SOUND OF LIGHT collection combines functionality and aesthetics, offering solutions for rooms where insufficient attention to acoustics reduces comfort. We have become more sensitive to this problem. Noise in restaurants, cafes or open-plan offices reduces the quality of life.

RYOSUKE FUKUSADA

FUKUSADA Studio / Japan

Traditional Japanese patterns often feature geometric shapes inspired by nature, which blend harmoniously with the interior. They are used in "sashiko" embroidery and draw an interesting parallel with Ukrainian embroidery traditions. Some of them have a deeper meaning; for example, the AJIRO motif is believed to have protective properties. Drawing inspiration from these rich patterns, we have created designs that complement the language of RE:QUIET wall panels. This concept combines cultural influences from Japan and Ukraine and is adapted for contemporary European interiors. We have named this collection MON – a Japanese word meaning "pattern".
